

Amirkian Kiani

Senior Software Engineer | Tech Lead

📍 Tehran, Iran ✉ amirkiankiani@icloud.com ☎ (+98) 9921267228 🔗 [linkedin.com/in/amirkian-kiani](https://www.linkedin.com/in/amirkian-kiani) 🌐 amirkiankiani.ir

Summary

Senior software engineer with 7+ years of professional Python backend experience, 10+ years of programming, and 2+ years leading engineering teams across ERP automation, AI-enabled products, and high-traffic media platforms. Own delivery end to end – discovery, technical design, estimation, implementation, testing, release, and post-launch monitoring – building event-driven microservices with Python, Go, Django/DRF, FastAPI, PostgreSQL, Redis, Celery, Docker, and Kubernetes. Apply DDD, Clean Architecture, SOLID, and test-driven practices, and document design decisions and trade-offs in RFCs before writing code. Track record of non-functional wins under production load, including cutting API response times from 15–20 s to 2–6 s on B2B platforms serving millions of users.

Core Skills

Architecture & Practices: Domain-Driven Design, Clean Architecture, event-driven architecture, SOLID, KISS, YAGNI, design patterns, TDD and automated testing, staging/sandbox validation, code review, RFCs and design documentation, observability, CI/CD

Leadership: Technical team leadership, roadmap and scope negotiation, estimation and delivery commitments, architecture review, mentoring and developer enablement, cross-functional and stakeholder collaboration, incident follow-through

Languages & Backend: Python, Go, JavaScript/TypeScript, Django, Django REST Framework, FastAPI, Gin, Node.js (Express.js, NestJS), Odoo, REST APIs, microservices, Next.js, ReactJS, React Native

Data & Infrastructure: PostgreSQL, MariaDB, Redis, Elasticsearch, Celery, pgvector, Pinecone, message queues, asynchronous and background processing, Docker, Kubernetes, Nginx, Git, Linux, FFmpeg, monitoring and alerting

AI & Automation: LLM integrations, RAG/retrieval assistants, prompt engineering, LlamaIndex, OpenAI APIs, n8n, MCP concepts, ERP and workflow automation

Experience

Senior Software Engineer / Technical Lead – Faraatar Entrepreneurship Group

Oct 2024 – Present

Tehran, Iran

- Lead the engineering team delivering Odoo-based ERP and internal platforms across HR, Accounting, Payments, CRM, and Project Management; own scope, estimates, delivery commitments, and output quality.
- Run discovery with business stakeholders, negotiate roadmaps and project scope, and translate accounting, tax, and operational requirements into technical designs, service boundaries, and delivery plans.
- Author design documents and RFCs covering service layout, integration events, and architectural trade-offs, and circulate them for peer review before implementation begins.
- Design and build REST APIs, IAP services, and microservices that extend Odoo and integrate ERP workflows with payment, messaging, WhatsApp/SMS notification, and third-party platforms.
- Run manual and automated tests across local and staging environments before every production release, and review all code merged by the team.
- Own CI/CD pipelines, containerized deployments, and monitoring dashboards; watch key metrics closely after each launch and follow reported issues through to confirmed resolution with the reporter.
- Drive non-functional improvements in performance, reliability, and reduced coupling between ERP modules and external services, and mentor engineers through architecture review, pairing, and code review.

Freelance Software Engineer – Freelancer

Oct 2023 – Jul 2024

Tehran, Iran

- Delivered backend and integration solutions for video processing, media delivery, and travel-ticketing platforms using Go (Gin), Python, Django/DRF, PostgreSQL, Docker, and CI/CD.
- Designed REST APIs and service boundaries for booking, payment processing, authentication, identity-provider integration, media conversion, and client workflows.
- Built scalable microservices for real-time video streaming, conversion, and editing, using asynchronous queues and background workers to keep processing reliable under commercial load.
- Owned each engagement end to end – estimation, implementation, staging validation, deployment, and post-launch support – working directly with stakeholders to convert business processes into maintainable services.

Python/Django Mentor – Maktab Sharif & Quera

Aug 2023 – Jun 2024

Tehran, Iran

- Mentored learners in Python, Django, API design, debugging, architecture, clean code, and production-oriented backend practices; built exercises covering REST APIs, data modeling, and asynchronous tasks.
- Partnered with instructors to align curriculum with modern engineering practices and developer productivity habits.

Senior Backend Developer / Tech Lead – Azadfekri School
Tehran, Iran

Sep 2022 – Sep 2023

- Led backend architecture and delivery for an AI-enabled social platform supporting video, audio, text posts, comments, live discussions, and content-based interactions.
- Designed asynchronous, event-driven pipelines for transcription, caption generation, summarization, and recommendations, decoupling heavy media processing from request-path APIs.
- Integrated LLM assistants and fine-tuned chatbots to summarize user sessions and provide contextual Q&A over shared content and platform conversations.
- Built scalable REST APIs and microservices on Kubernetes, improving availability, resource utilization, and maintainability.
- Established automated and manual test coverage plus a staging environment mirroring production, validating every release before rollout.
- Owned CI/CD, deployment automation, and production reliability under heavy user load, monitoring key metrics after launch and iterating on bottlenecks.

Technical Backend Developer Expert – Golden Key
Tehran, Iran

Sep 2021 – Sep 2022

- Developed backend systems for large-scale B2B products used by major clients including Digikala, Namava, Irancell, MCI, and Soroush+.
- Reduced response times across Golden Key projects from 15–20 s to 2–6 s – roughly a 70–85% cut – through query tuning, caching, Redis/Celery background processing, and code-level optimization, guided by profiling and latency metrics.
- Built and optimized REST APIs for HTML games, video streaming, music, podcast, and audiobook platforms serving high-traffic enterprise integrations.
- Validated every release through manual and automated testing on staging before production rollout, and coordinated integration testing with enterprise partners.

Python Backend Developer – Codenegar
Tehran, Iran

Apr 2021 – Aug 2021

- Designed backend systems for an e-commerce platform and a creator monetization product supporting donations, subscriptions, and digital content sharing.
- Built REST APIs, database schemas, and integration flows, partnering with frontend and DevOps teams on scalability, stability, and secure delivery.

Python Backend Intern – Richedu
Vancouver, Canada

Dec 2020 – Mar 2021

- Contributed backend features to a Django-based Learning Management System with an international, distributed team, and supported testing, refactoring, and documentation.

Selected Projects

- **Baazigooshi** – baazigooshi.com: B2B web gaming platform serving 3M+ users, delivered for partners including Namava, Digikala, and Zarebin; built content management, analytics, and integration services.
- **Azad** – azad.im: AI-powered social platform with LLM summarization, contextual Q&A, transcription, captioning, and recommendation workflows.
- **Gardima** – gardima.ir: Travel booking platform in Go (Gin) and React Native for plane, train, bus, and hotel reservations; built ticketing, payment, and booking services.
- **Odoopro** – odoopro.ir: Faraatar's flagship ERP product covering Odoo module development, workflow automation, integrations, customization, and deployment.
- **Converter API** – Go-based video/audio processing service for transcoding, editing, playback, and integration workflows.
- **iTunes / Chaargoosh / Videaneh** – backend services for streaming, subscriptions, purchases, encoding, content management, and high-volume secure media delivery.

Education & Certifications

Master of Software Engineering – Islamic Azad University, North Tehran Branch
Bachelor of Computer Engineering – Quchan University of Technology, Quchan, Iran
TOEFL iBT – Total 109 (R 29, L 28, S 26, W 26)
Managerial Functions of Leadership, Finance, Marketing – Upkey
Linux 0-Z – Quera College

Thesis phase (final stage)
2024

May 2021
